

NEW MAGNETIC BASE ADAPTER
FOR KELL-STROM DIGITAL PROTRACTORS

Kell-Strom announces that a Magnetic Base is now available for Kell-Strom Digital Protractors. Kell-Strom has announced that effective immediately a magnetic base can be adapted for use on its Pro360 and Pro3600 Digital Protractors. In the same size and configuration as the aluminum base, the precision lapped addition includes the mounting screws which hold the magnetic base in place. The addition adds only 3 1/2 ounces to the weight of the unit but makes it much more useful for hands free measuring. The magnet will hold securely on a 1" diameter steel pipe. The unit is available as an option on the protractor itself, or it can be purchased separately under Kell-Strom part number KS571. Competitively priced, the adapter will pay for itself many times over with the ease of use and time savings provided by the magnetic base.
